

Emmebistudio (originally M.B. Studio) was founded in 1993 and currently consists of four people.

We have been making 3D animations and short films since 1997.

Thanks to the creation of 3D graphics, we are able to transform any concept or idea into an ideal presentation to explain the advantages of a certain product, the assembly or disassembly instructions of a machine or its operation.

Starting from a few sketches or two-dimensional drawings, we can model the product in 3D, bring it to life and thus create a real 3D animation!

Following the 'storyboard' we produce the sequences agreed with the customer, be they commercials, interactive films, assembly instructions and much more.

Once the animation is complete, we proceed with the rendering of the sequences. With the export of the film, we define the choice of quality, resolution, size and many other parameters that allow the creation of photorealistic images thanks to the most advanced 3D Rendering techniques.

Once the rendering is complete, we assemble everything, creating a video complete with soundtrack, narration voice, sound effects and special effects in post-production.
